

-
- Service Area:** Environmental Planning and Traditional Land Use Assessment
- Project:** Traditional Land Use Assessment for several 500 kV, 240 kV and 138 kV Transmission Lines and Facilities
- Client:** B.C. Hydro and AltaLink Management Ltd.
- Location:** Alberta and British Columbia

The **human environment group (HEG)** has facilitated numerous community-based assessments related to traditional land use and heritage resources within the context of proposed high voltage transmission lines and facility upgrades.

These studies provide information related to Aboriginal rights and title; identify areas of concern that require special consideration during project planning; and in some cases, site-specific mitigation strategies. HEG works closely with community members to support all aspects of project execution including work plan development, training, field support and reporting. HEG facilitates effective integration of TLU data into Project Environmental and Heritage Management Plans.

HEG also tracks issues related to community health and safety, contracting and procurement, and community relations for the purpose of Project commitments or impact benefit discussions.
